

Cisco Meraki Security for Remote Work

A new reality of remote work

A new reality forces our customers to do things differently. Meraki cloud-managed security appliances deliver an ‘in-office’ experience to your customers’ employees without the cost or complexity of traditional architectures, allowing them to:

- Create emergency healthcare, government and community services with little infrastructure
- Maintain accessibility to health services even when employees can’t leave their homes
- Keep call centers and sales teams running remotely
- Maintain critical business operations securely while off-site

Discovery questions

- How is your current network set up handling the influx of remote workers?
- What is your plan to quickly and securely enable employees to work remotely with minimal disruption?
- What business-critical applications do you need to prioritize and monitor for remote employees?
- Do you have a business continuity plan for your critical network applications?

Provide solutions

- Zero-touch provisioning of Meraki appliances removes the need for pre-staging equipment or on-site configuration
- Extend the network to Windows, Mac, Linux, Android, and OSX clients everywhere with the built-in client VPN
- Identify and solve problems remotely, without the need for on-site assistance, with network visibility and troubleshooting tools
- Ensure the network only extends to trusted devices with wired and wireless 802.1X authentication
- Backup connections available such as cellular and secondary WAN ports for redundancy to keep your employees connected
- Troubleshoot application performance across a diverse user base with MI analytics to quickly identify problems when they arise

Things to listen for

Remote employee challenges:

- Variable connectivity
- Unpredictable SaaS application performance
- Reliance on video conferencing due to lack of VoIP access
- Consumer-grade network security

Customer characteristics::

- Requires easy and quick installation and management
- Wants visibility across the entire network
- Has a need to gather more intelligence from their network
- Needs to ensure productivity loss is minimal working remotely

Take the first step

Send your customers to a [Cisco Meraki webinar](#). Qualified attendees **get a free Meraki product** just for tuning in!

Get your referral link at merakipartners.com under “Lead Gen.” You will get full visibility of all your referred leads for follow up.

Current promotion
